The Economics Textbook by Paul Krugman and Robin Wells

SYNOPSIS: This economics textbook is one of the top college textbooks on the subject, assisting students preparing for the Advance Placement exams. Written in an interesting manner, the author, a winner of the Nobel Memorial Prize in Economic Sciences, uses a variety of real examples to illustrate the ideas and concepts for students.

→ **REASON FOR TEACHING:** Written in a straightforward style, this textbook explains economic concepts at a high level yet in an accessible manner. The author incorporates real examples, events, and countries while explaining concepts. As this is an advance level course designed for juniors and seniors, students are expected to be able to effectively interact with a secular college-level textbook from a biblical perspective as they prepare to interact with economic ideas in their personal lives, academic studies, post-high school plans, and future careers.

DISCLAIMER: HSLDA Online Academy does not agree with all the author's personal views on economics and does not expect families and students to do so either. This secular college-level textbook is not the extent of the course curriculum, but merely one of the tools used in the course to support student learning as they prepare for the AP exam and collegiate level studies. The course instructor and overall curriculum incorporate a biblical perspective. The textbook addresses topics about which there are many opinions. Students should engage openly with these ideas while recognizing that the textbook is not a definitive authority.
